

# Downloading SeaMonkey on Safari

1. Go to [www.seamonkey-project.org](http://www.seamonkey-project.org), and in the green box it should say your operating system and language. If this is correct, click the link. If it says something different, click “Other Systems & Languages” and find your respective language and OS.

2. When the file is done downloading, click the “Downloads” icon in the lower right corner of your screen, then click the “SeaMonkey 2.26” file.

3. In the window that comes up, click and drag the SeaMonkey icon into the Applications folder, then exit the window.

4. You can now move on to the SeaMonkey for Mac instructions.
