### Complete list of shortcut keystrokes for entering HTML tags

Here is a list of the shortcuts:

For container tags, first select some text if you want to place the text inside the container tag. Hold down **Control** and **Shift**, then press:

**I** for **Italic** (you will get `<l>my text</l>`)

**B** for **Bold**

**U** for **Underline**

**<** to **decrease font size**

**>** to **increase font size**

**A** to enclose something in **single quotes**

**Q** to enclose something in **double quotes**

**R** or **[RETURN]** to insert a `<br />` tag

**H** to insert a `<hr />` tag

**L** to insert a **link**

**W** to create a **link which pops up a new window** (you could use this to allow the user to go to a new Web page without losing their current position and asset values in the maze)

**K** to create a **link which shows hidden content** (this technique is used in this tutorial)

**F** to insert a full **font tag**

**E** to insert an **embed tag**

**P** or **G** to insert an **IMG SRC tag**

**[Up arrow]** (or **+** on the NumPad) for **Superscript**

**[Down arrow]** (or **-** on the NumPad) for **Subscript**

**[Right arrow]** for a **blockquote tag**

**C** to **center text**

**D** to create a **JavaScript Alert** (a popup message -- you could use this for glossing a word)
